

## Assignment 3

- Write a SELECT query to retrieve all columns from a 'customers' table, and modify it to return only the customer name and email address for customers in a specific city.

### Solution :

All columns in customer table:

User: SYSTEM

Home > SQL > SQL Commands

☐ Autocommit Display 10 Save Run

```
select * from dept;
desc dept;

create table emp2(id number(10) primary key,
name varchar2(10) not null,
email varchar2(20) unique,
age number(10) check(age>22),
deptid number(10),
constraint fk foreign key(deptid) references dept(id) on delete set null);
```

Results Explain Describe Saved SQL History

ID	NAME	MANAGER
1	trainee	sunil
4	admin	ajay
2	developer	deva
5	finance	babalu
3	tester	rk

5 rows returned in 0.00 seconds

Display customers whose city='pune';

Home > SQL > SQL Commands

☒ Autocommit Display 10 Save Run

```
insert into customer values(5,'kiran','kiran@12gmail.com','pune');
select * from customer;
select * from customer where city='pune';
```

Results Explain Describe Saved SQL History

ID	NAME	EMAIL	CITY
1	ajay	ajay@12gmail.com	pune
2	vijay	vijay@111gmail.com	pune
5	kiran	kiran@12gmail.com	pune
